

What One Can See in a Day in the Great
Shop of Whiteley, the Provider
of All Things.

Having her home under the same roof or adjoining lot with the shops she works, there are no extra expenses for car fare and a dozen other little inconveniences that are imposed upon the American working girl. Having no concern as to food and clothing and the above mentioned expenses, she can close at a very low price, her \$100 a year or all the way up to \$350 a year, enables her to live comfortably and always appear neat and happy. Unless such a girl is very miserly she can make the easy. Being paid weekly, she can get the best results out of their earnings and keep money always in hand for their pleasures and necessities.

[illegible]

mistake! And then the Deacon sank into his seat as if suddenly seized with paralysis.

"What a terrible experience," which the Deacon in his nervous excitement had mistaken for a test.

"Doesn't want her too hard on the Deacon," observed the pastor, who had put on the former's overcoat preparatory to leaving him, and then took him his glasses. The company then dispersed.

From the pulpit on the following Sunday the Reverend pastor read the account of the death of Johnnie had imprudently gone out on Friday evening without his overcoat, he had contracted a severe cold in his lungs which prevented his attending to his duties. "The Deacon," he said, "was kind enough to pass the plate in his stead."

Brother Davis, after carefully removing the Deacon's overcoat and hiding it under the seat, cheerfully assented to the tale thus imposed upon him.

Where Some of the Grandest Fighting
Was Done in Presence of the Allies
Before Balak'ava

Indeed, there were three famous regiments in the "Heavy Brigade" of the British Army: the Englishmen, the Irishmen, and the Scots. The Englishmen were the Inniskillings, all Irish, and the Scots' Grays, a "braw lads" from north of the Clyde. The famous "Union Brigade," that fought under Ponsonby at the battle of the Alma, was strengthened by the addition of the Fourth and Fifth Dragoon Guards. There were only ten small squadrons in all, for many gallant fellows of the regiments were greatly reduced in strength, but there wasn't a man in the compact little force that did not for some time have a Turk on his back. It was not long before the Turks had been driven and were

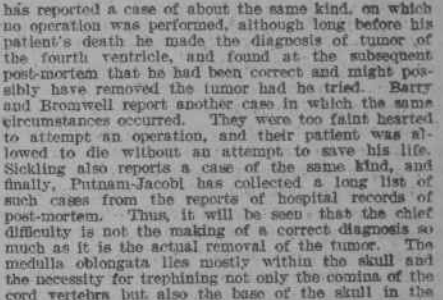

DARING SURGICAL OPERATION IN A PRIVATE HOSPITAL DESCRIBED AND PICTURED.

At a private operating room in this city one of the most marvellous pieces of surgical work—and it may be safely said, one never before attempted—has just been performed. The audacity of the surgeon's knife, which spurs neither brain nor any other of the organs hitherto called vital has at last attacked the very seat of life itself.

Donna Maria Antonia de Romero, daughter of Don Dominguez de Romero, of Rio San Diego de Cuba, a wealthy planter, was the patient, suffering from

But little bleeding took place during the operation, and the vessels of the brain were closed by the pressure of the vessels and the small arteries, carefully tying every vessel cut as soon as it was severed.

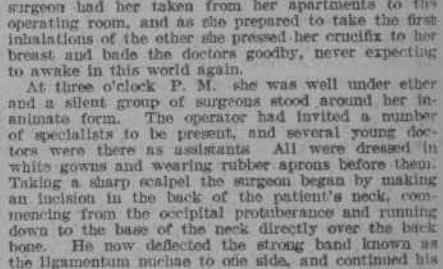

"The medulla oblongata," said one of the surgeons, "is a small, soft, pinkish mass, which lies below immediately under the pons variolus, at the base of the brain. It is the commencement of the spinal cord and is the most important seat of nervous energy. It is the seat of the origin of all the originating centres of respiration, speech and deglutition. It is about an inch and a half to two inches long, its shape being pyramidal. It lies at the base of the head, and its lower end descends obliquely backward to the foramen magnum, where it emerges from the brain and forms the spinal cord. It is sometimes called the vital knot. On the back of the medulla oblongata is the fourth ventricle."

Donna Marie had been told that there was a chance of life if she would agree to have a crucial test made on her. But there was no hope without the operation. This meant to this woman, who had

back of the head with considerable force. The immediate result was the partial paralysis of the lower parts of her body, produced, doubtless, by a lesion

"It must be entirely," said the operator, "within the bony canal of the spine itself." He now carefully dissected away the muscles from the lamellae of the second and third vertebrae. Then, taking a ten-

stood out of his forehead, and except the heavy breathing of the patient under ether, the room was as silent as a tomb. The least cut of the knife into the medulla meant death: her life hung on a hair.

where it emerges from the brain and forms the spinal cord. It is sometimes called the vital knot. On the back of the medulla oblongata is the fourth ventricle.
